

Host Security Assessment

VALUE

PatchAdvisor will provide a professional third-party host-level security assessment on devices within your infrastructure. Our team will review each host for weaknesses in patch management, misconfigurations and policy violations so we can provide clear and thorough recommendations for improvement.

Our host security assessment approach is specially tailored to your environment so we can assess the true vulnerability of each host within your infrastructure. Our unique methodology has been proven and refined over two decades and hundreds of assessments. **It goes beyond merely using commercial tools and applications.** We'll combine a specific set of relevant tools and our expertise to identify, assess and exploit known weaknesses within each assessed host.

SERVICE

PatchAdvisor uses a variety of public domain and proprietary tools, as well as hands on experience to assess each host within your environment.

Typical assessments include, but are not limited to:

- Enumeration of operating system and application patch levels
- Identifying improperly configured file system permissions
- Reviewing account and password policies
- Analysis of application level configurations
- Identifying trust relationships

Our reports are customized to your unique environment. Every report provides an informative and thorough analysis of, and recommendations for, each assessed host. In addition, each report provides a knowledge transfer of actionable issues to your administrative staff as well as a high-level overview to management.

Every report will include:

- Summary of findings
- Available services
- User account policies and permissions
- Operating system patch level
- Application patch level
- Improperly configured system and application settings
- Listing of prioritized recommendations

EXPERIENCE

PatchAdvisor's professional assessment teams are comprised of top experts in their field. In addition to having over 60 combined years of security expertise, our team members maintain extensive knowledge in a wide range of subject matter including first-hand administrative knowledge of most legacy systems and the latest cloud computing applications and components. Additionally, many team members have been published in trade papers and books, and have been presenters at industry tradeshows and large invite-only security gatherings.

PatchAdvisor's staff has provided thorough Host security assessments throughout the world. Our team maintains various U.S. Government clearances and has conducted numerous assessments within classified environments.
